**POL GRUP**

PROJE MİMARLIK İNŞAAT VE ATIŞ POLİGONU KURULUM LTD. ŞTİ.

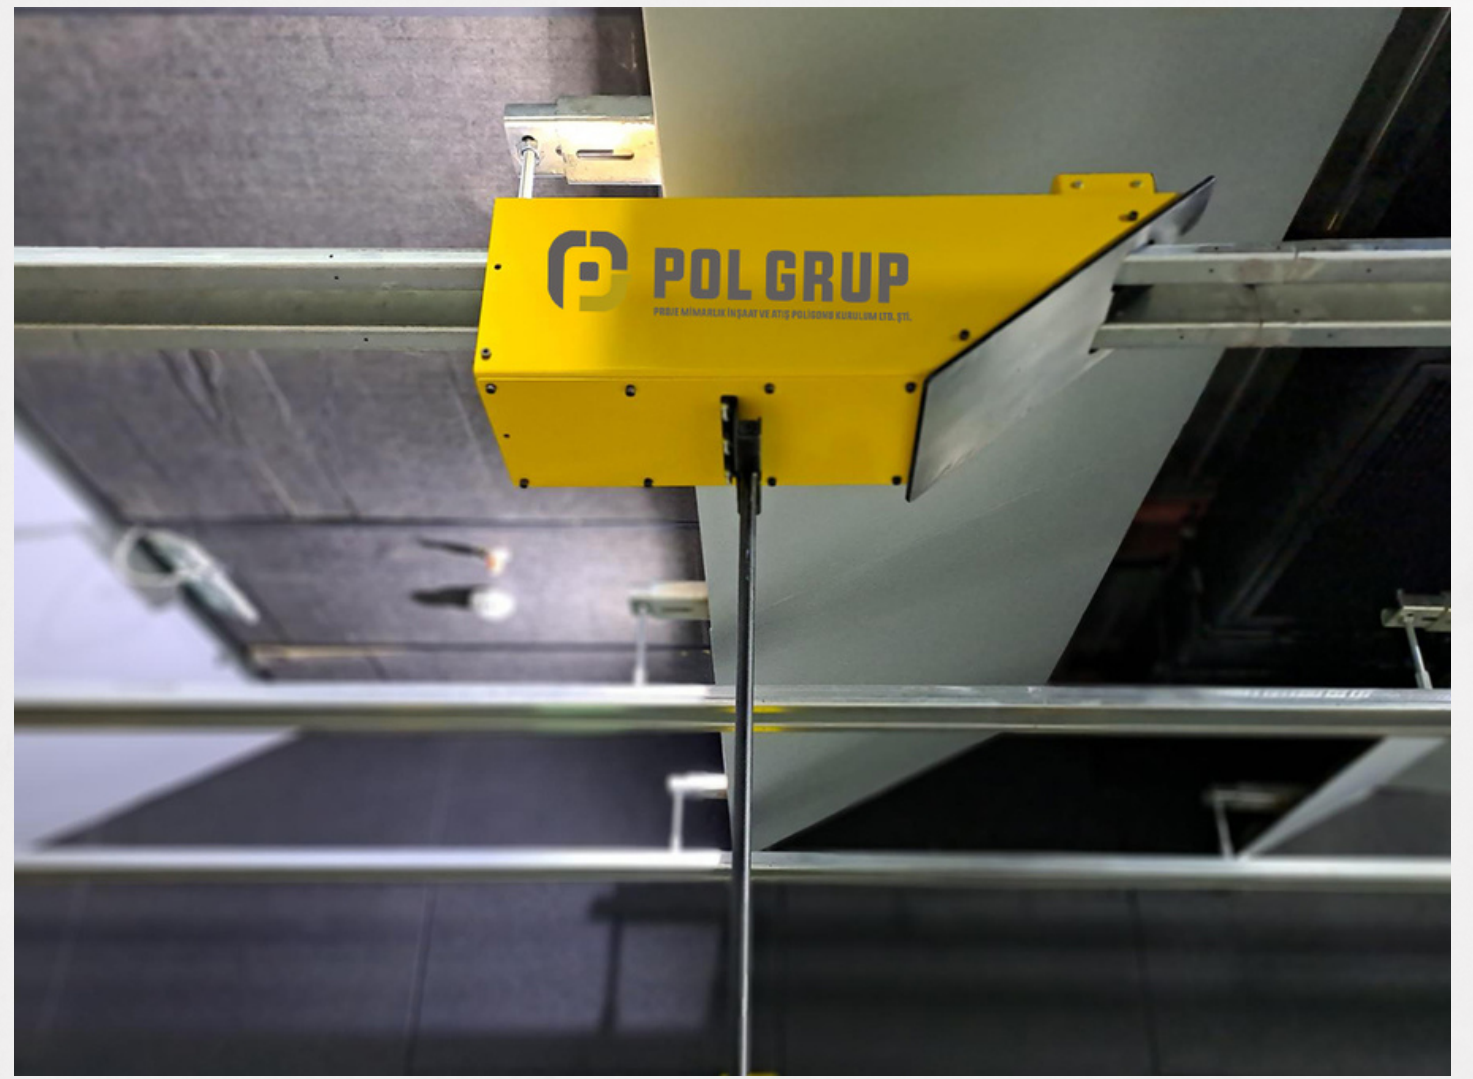

## **ELECTRONIC (CORDLESS) TARGET SYSTEM**

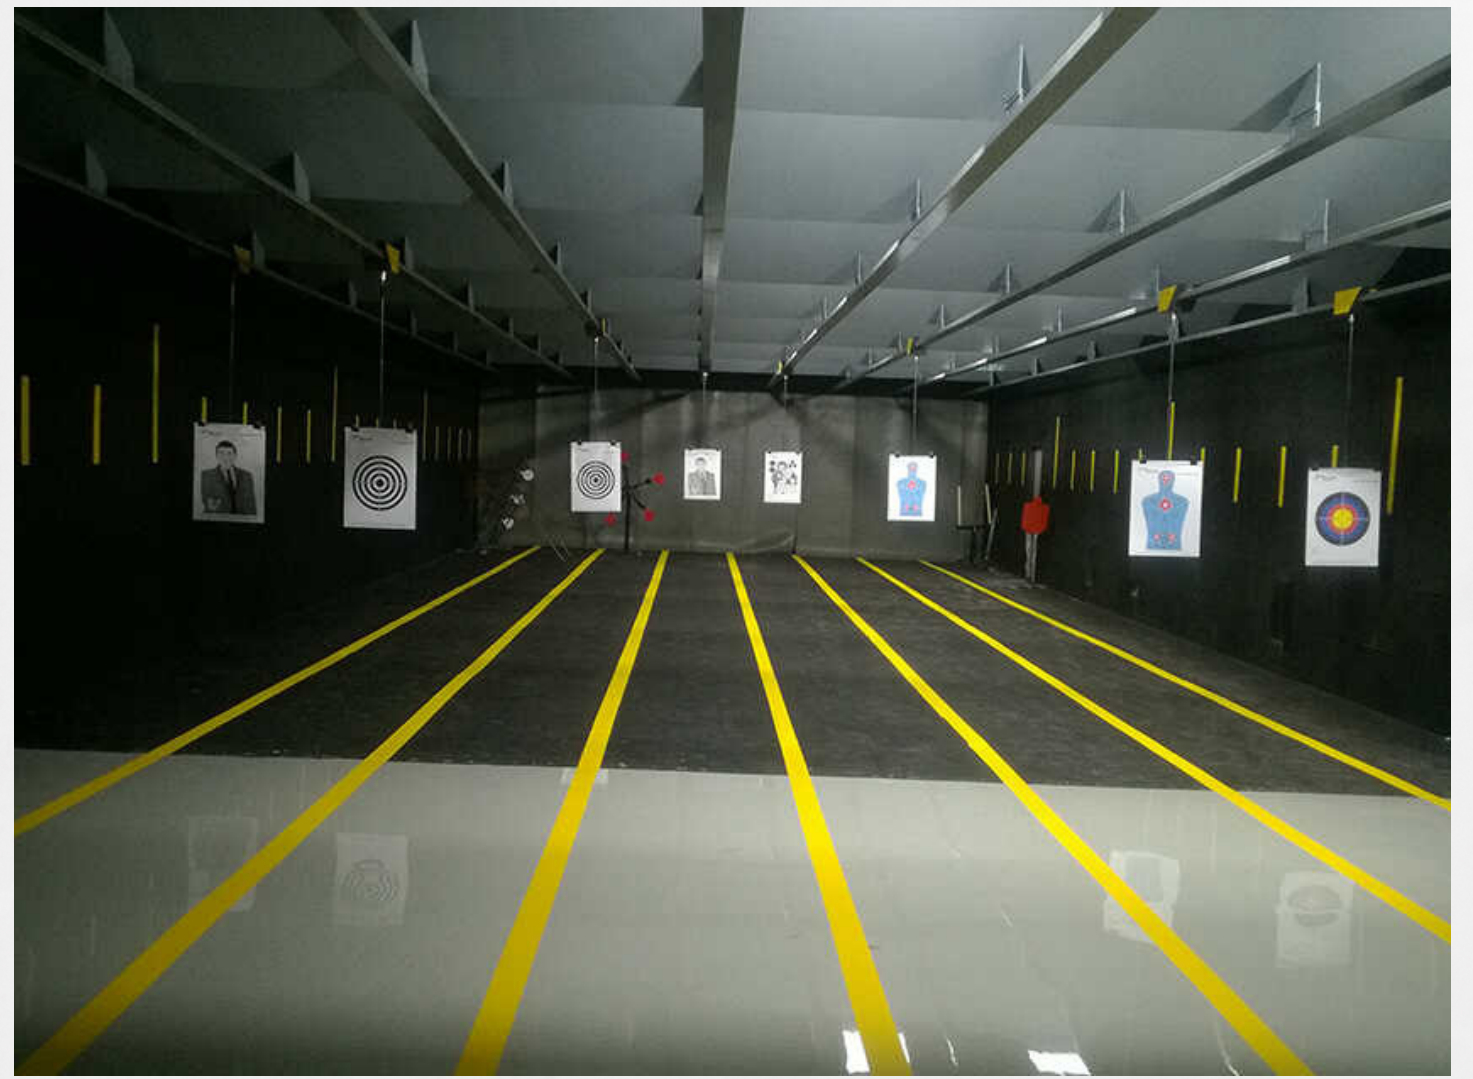

- The Electronic Target system is a rail and battery system that calls from the ceiling.
- 100 l iron will be used on the rails of the target system with the call from the ceiling.
- The target carriage is made of armox 500 quality sheet metal, the wheels are made of friction and wear resistant bearing material, PU coated, noiseless material.
- Targets can stop at 0-5-10-15-20-25-30-35-40 meters.
- Targets move quickly and silently for 40 meters. It automatically slows and stops on take off.
- Each user can easily change the target paper from the shooter's intermediate compartment.
- Distance controls are made with electronic devices.
- \*Information exchange between the electromechanical target system and the control unit is provided by a wireless system.
- 10" touch screen is used for ceiling call target system controls.
- A speed dome camera will be integrated into the system.
- 32" LCD screen allows the shooter to see targets between 0-40 meters clearly without searching for the target.

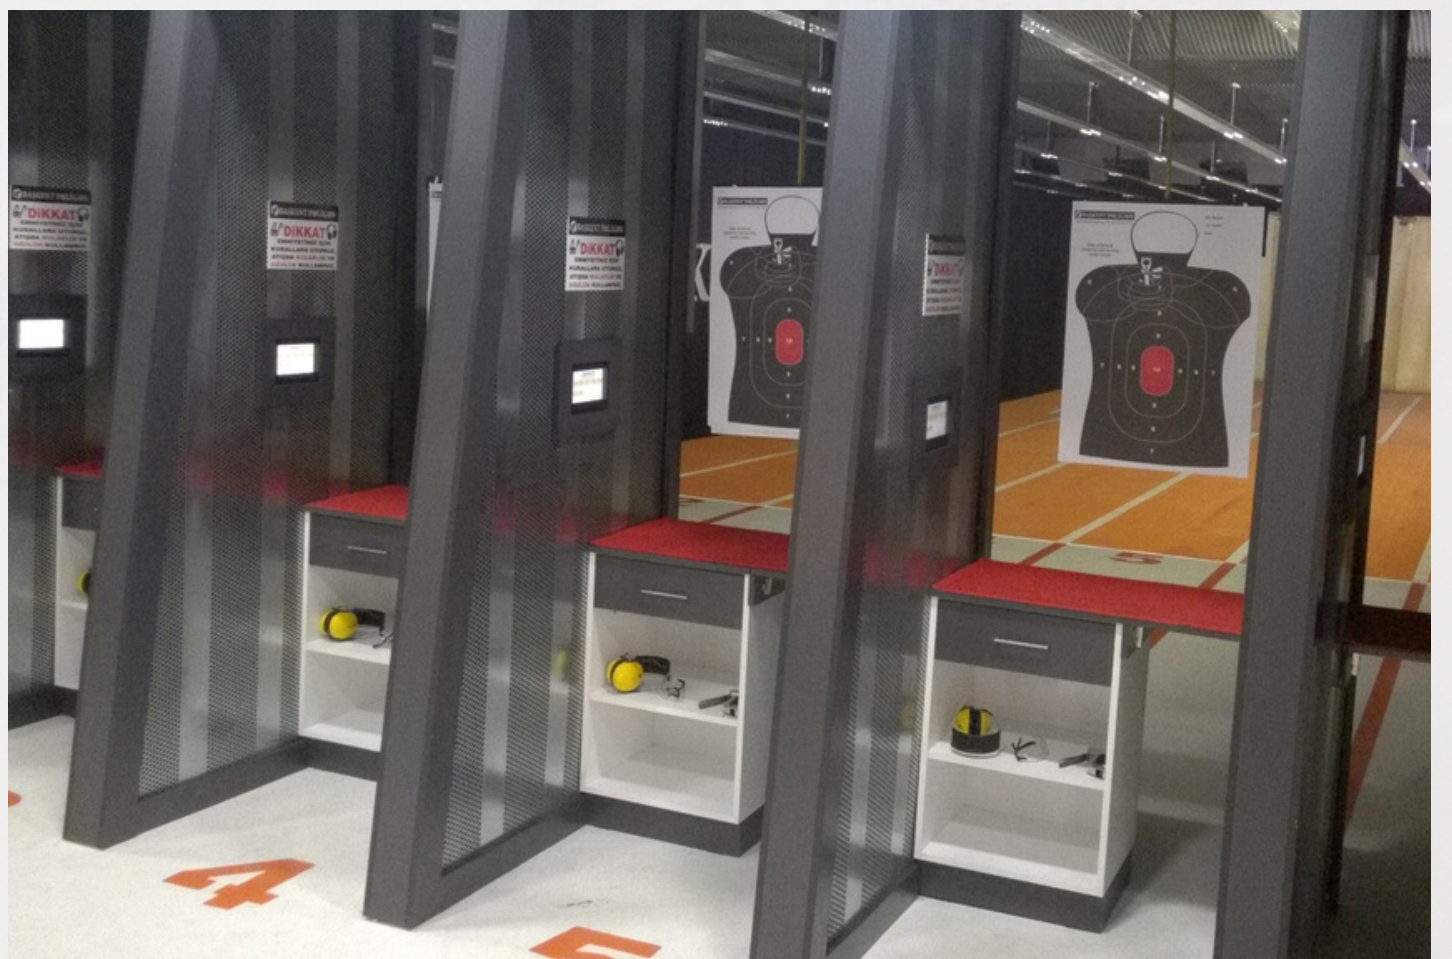

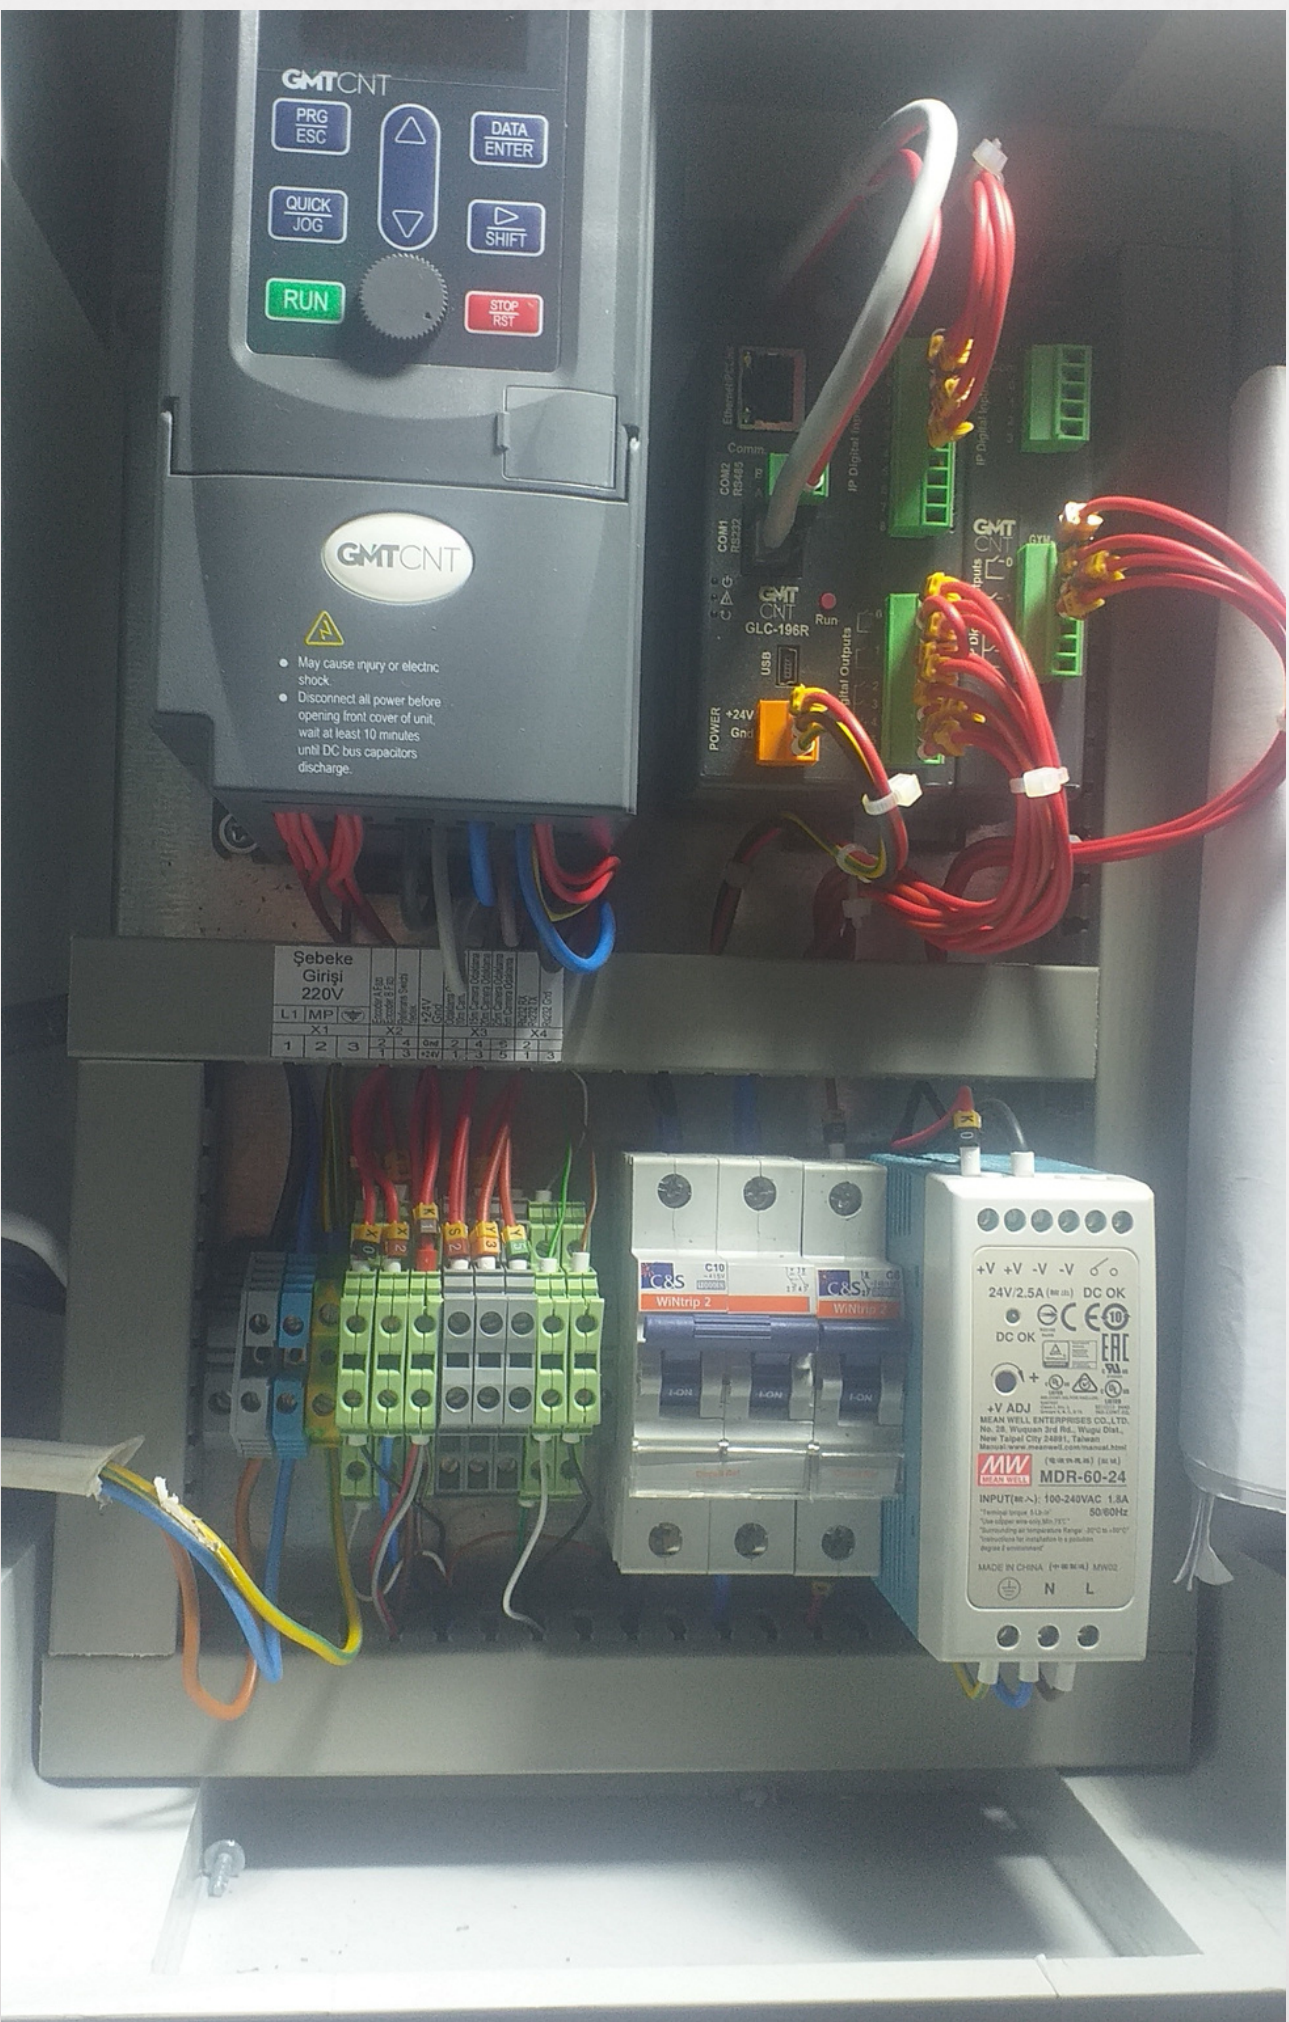

# POLGRUP

PROJE MİMARLIK İNŞAAT VE ATIŞ POLİGONU KURULUM LTD. ŞTİ.

We have been making architectural projects and applications in the sector for many years. In the last 30 years, we have been involved in hundreds of projects in the sector and have improved ourselves in every business. For the last 7 years, we have been mainly designing and implementing shooting ranges. Our aim is to develop quality and applicable projects in all areas of the construction industry and to implement these projects. We develop viable and safe systems and projects in the shooting range industry. We strive to design and build safer, more efficient projects. In recent years, we aimed to activate the sector by starting R&D studies on moving target systems, especially for shooting ranges.

We carried out the project and installation of 25 out of 65 polygons in Turkey.
